ABSTRACT

A patient with chronic obstructive pulmonary disease is treated with Cell Sonic VIPP and feels much better immediately. His testimonial is translated to English followed by my comments based on a video call.

Testimonial

First, here is an English version of a testimony: Great feedback from a satisfied client. Patients with respiratory ailments have experienced some of the greatest successes with Cell Sonic treatment.

1. Cell Sonic Treatment

I am a man in my late 50s who suffers from a series of chronic ailments.

- Very severe chronic obstructive pulmonary disease (COPD) after a severe inflammation around the lungs in 2011. Big smoker from 1979 until 2012. Had Sarcoidosis flare up in

my lungs after severe inflammation. I'm measured at 21% to 24% lung capacity left - and no prospect of improvement through treatments offered by the Danish ordinary healthcare - other than possible lung transplant (with an average lifespan of up to five years post-transplant). I was severely out of breath by taking a shower, emptying the dish washer, vacuuming, walking more than 20 to 30 metres. Yes, even

quite modest physical exertions caused breathing difficulty, at times to an extent that affected control of the bladder.

- I have had diabetes 2 (1.5) since 2000, including widespread psoriasis, mostly visible on hands and feet. Over the past five years, I have had a slack prostate, but longish toilet visits and a slack discharge.

I have now had two CellSonic treatments, the latest today, the first ten days ago. After the first treatment, I was able to observe the following:

- The resistance in the lungs when inhaling and exhaling has been significantly reduced - already by the same evening! I forgot my inhaler at the night before bed (unheard of otherwise) and choose to try not to take it, with the clear expectation that I would wake up during the night and need a few breaths of my inhaler. That didn't happen. Woke up the next morning with even better peace - and air - in my lungs.
- I can take a shower, empty the dishwasher, walk AND talk at the same time, vacuuming causes merely minor breathlessness!
- I have reduced my inhaler consumption by what is like 80% (took four inhalations daily before, now one inhalation approx. every other day). I do not use the fast-acting inhaler anymore.
- The psoriasis on my hands and feet has gone completely dormant. No heat, itchiness or skin irritation.
- Time spent on visits to the toilet has been reduced by more than half and the function feels much improved now, with a stronger beam and therefore significantly faster water discharging.

I am of course happy for these improvements and the alleviation of my condition after just one Cell Sonic treatment (and I am just getting used to), but I also think that many people must be in my situation, with no hope of improvement, only medication-based symptom treatment through the normal health care system.

The term COPD covers many conditions and ailments, but if you are struggling with mucus, shortness of breath, or similar, you should definitely have a Cell Sonic treatment - if you ask me, because wow...!

I didn't have a clear expectation of results the first time, but I was NOT expecting such clear and obvious effect as the case has been, either on the lungs, prostate or psoriasis!

I have received my second treatment today. I have an appointment for the third in 14 days - and I am already looking forward to it!

Love, Martin

2. Comments by Professor Hague

Martin's testimonial tells the story of his rescue. I wanted to know how he got into the mess in the first place so a Skype call was arranged and we talked for over an hour. He is a genial fellow and will advise anyone else who genuinely is in the same predicament but he does not want to divulge his name to the entire internet. Send your enquiries to my office.

Martin has friends and always did. The social group is important. He began smoking when everyone else did at the age

of 13. He is almost 60 now and admits to being overweight. As a teenager, it was expected that you would smoke. Doctors did. So did teachers and all cafés and restaurants were full of smoke. Interestingly, alcohol was not important to him. By the age of 16, he had asthma. He is well educated and ran his own business with his wife for many years. They both smoked and when they became ill the business had to close. He is now a peripatetic teacher able to cover all subjects except sports.

In his twenties, Martin did manage some sports and was running long distances but did not enjoy it. To him, it was not fun and he preferred the company of friends and a party. What is interesting is that he has not developed cancer. He has been tested for it many times and it has not happened. He knew about the cigarette health warnings but would not be pushed around by anyone, least of all the government. Smoking is defiance and freedom. When he eventually decided to stop, it was his decision assisted by hypnotherapy. Twice before he had broken the habit but started again after a cigarette at a party. He stopped finally on 19th August 2012 and is sure he will not begin again.

In Martin's story, there is no mention of stress such as we often hear with cancer patients suffering from bereavement, relationships and isolation. Martin simply had a lifestyle bad for his body and at the same time good for his mind. Indeed, tobacco and nicotine can cause cancer but that alone for Martin was not enough. His immune system was overloaded with antibiotics that shut off the immune system allowing the bacteria of sarcoidosis to flare up between the lungs and surrounding organs so that his lung capacity was reduced to a fifth of what it should be. With such a loss of oxygen entering the blood, cleansing failed and further illness developed.

Martin had read about frequency healing and was aware of Cell Sonic almost two years before he decided to try it and now regrets not going to Cell Sonic sooner. The improvement was immediate, as he testifies. Although he is unlikely to take up sports, he and his wife will lead healthier lives and if they feel down, they will go to Cell Sonic rather than the regular, symptom treating, drug pushing doctor. Martin questioned why doctors are not paid according to results.

The treatment was performed by Jette Breitenstein in Denmark.

<https://www.cellsonic-clinic.dk>

The actual treatment takes only a few minutes. Most of the time is spent talking. No drugs are used and it is all non-invasive and painless.

3. Conclusion

Martin will benefit from a treatment along his spine which connects to all the organs including the heart. He still monitors his sugar levels. Treating the pancreas will revitalise the Islets Langerhans and as they produce more insulin he can take less synthetic insulin. He tells me he is producing his own insulin but it does not work. This is strange. The psoriasis was stopped by the first Cell Sonic treatment and further treatments will bring it totally under control and hopefully eliminate it. Martin's relaxed and affable nature is his salvation and now that he sleeps fully his immune system will heal him. I did not lecture him about diet. He knows what he should eat and what he prefers is his choice. He had already told me about freedom and, having a lot in common with anarchists, I knew where my advice stopped

and his decisions took over. Nevertheless, Cell Sonic pulled him out of the hole and he would never have climbed out on his own.

August 2025 - reports on Martin from Denmark are that his life is back to normal. He continues to tell everyone about the remarkable work that Jette Breitenstein is doing with Cell Sonic. Her latest book about Cell Sonic energy healing will be published in the next few weeks.
