### ABSTRACT

Time Travel, The Universe Explained,  $T=(E=MC^2)$  or  $T=(E)$

For us to solve for "E" Universe Energy in Einstein's ( $E=MC^2$ ). We would have to see far enough from our point in Space to view the Center Point, and on the opposite side of our Time Line, view the Edge of our Universe.

At that moment we are viewing light from both locations  $C^2$ . We answer Distance and find the Radius to solve "M" Universe Mass. Allowing us to solve the equation and answer "E". Applying a Concept of Time to the Energy value for our Universe. "T" Universe Time would be answered as to how much growth over a given period.  $T=(E=MC^2)$  until that day, when talking about Universe Time. The Universe is the original perpetual motion machine, if you will. The Universe is always growing/expanding with Time, as it redistributing Matter equally throughout.

**Keywords:** Antigravity; Flying Cars; Time shield

### 1. Introduction

Fusion Power works now. After 70 years we fixed it. The reasons I believe it took so long?

1. We did not have answers in Physics for Fusion of, or Bonding of Neutron Molecules.
2. It takes a special kind of crazy to, "point lasers at themselves", with invisible Hydrogen Molecules in between them. Then to crank the power output of the Lasers up to that of powering a town level. Unless that is to say, you know why you should and what it will do before you try it. My Physics explain such things. Like why so much power is required to bond Neutrons.

Please do not be afraid of the technology showing the existence of aliens either.

I'll explain it to you, like I explained it to my pen-pal friend Joe Biden before I got his 1st response back.

1. The first society of humans gathered together due to technology. Agriculture prevented us from having to follow animals to survive. They also invented writing, cuneiform.

They wrote to keep track of food for survival. Those Sumerians also wrote about Aliens and their technology.

2. Dark Ages the talk of Science and Technology was punishable by being burned alive at the stake. Yet we emerged into the Renaissance, with beautiful Oil Paintings of Space Ships in the sky.
3. Even now some of our Nation's Leaders are releasing some of their evidence.

I began my work on this back in 2007, while I was attending Indiana State for Commercial Aviation. I believed I had plenty of proof for my original Hypothesis, though I believed Scientists would see the answers I saw, themselves soon. Physics was simply a hobby at the time for a man whom loved Aviation, Space, and technology.

\*Please excuse my Dyslexia. I recognize I will still have grammar or spelling issues with my work. I currently try to proofread myself as it is may be obvious, I have not been working with others on this.

#### 1.1 An Introduction to Time Travel

Time Travel is possible. Though the type of Time you want

to travel, requires a better understanding.

## 1.2 Time/Space and Technology Explained

We begin with a Simple Physics Experiment:

1. Take a piece of string about 4 ft long.
2. Curl one end into a circle about 3 inches big.
3. Place a small object like a dime at the center.
4. Begin to expand the circle.

**Note:** The center point never moves with any amount of expansion.

(This becomes our stationary point, everything from this point is what moves with expansion. Our Universe began from one point in Space, and has been expanding ever since.)

## 1.3 My Original Hypothesis: How to Measure and Locate the Center of the Universe

- A. The Center of the Universe is the oldest place in the Universe, as all Space/Time expanded from 1 point in Space/Time.
- B. Therefore Matter has acted upon each other there the longest. (Any interaction of Matter, say a meteor and a planet. With an interaction even If contact isn't made, trajectory & velocity would be affected. This applies to all Matter & interactions).
- C. The exponential number of interactions relevant to Time. Will have slowed the Expansion of the Universe the most at that location in Space. Slowing it so much so, that it is noticeably Slower than the Expansion speed of the relevant Outside Universe. It would also be noticeably from any location in the Outside Universe.

## 2. Proof: (Time / Speed / Distance)

- a. Distance is fixed. (We can only see as far as our current telescopes allow. The current distance with our best telescope being Hubble, at ~ 5 Billion Light Years from Earth we saw expansion speed change).
- b. Speed has changed.
- c. Therefore Time has changed. (Scientists are seeing a Time Displacement).

### 2.1 Working Universe Model

I will help you begin by drawing the 1st Universe Model. (Originally realized 1508-1514 printed 1543, Copernicus Heliocentrism. With my directions, you will correct the mistakes preventing us from using it for our Universe.)

This will only be a 2 dimensional slice view, of our "Perfect Sphere Universe" (Einstein's Exactness Theory proven).

1. Draw a circle with a point at the center.
2. Draw rings like a tree inside. These invisible lines of Time represent a Billion years or so each.
3. We need to graph Dark Matter Energy. (Hubble publications for expansion speed measured and increased from previous numbers. It is expressed we don't have all the Math working yet. However, we will graph it anyway and correct and change the formula too. 0.0 Time / 0.0 Dark Matter Energy at bottom left of graph. The line goes off at a 45° angle straight line to the right.

We Change the Formula to  $T=(E=MC^2)$ . (We add the component of Time as Time is relative in the Universe. Time is

the only measuring tool we have for the Universe currently. When you add the component of Time, you see many transformations of understanding where there was no understanding Previously.)

4. Lay the graph over the drawn circle. 0.0 Time/0.0 Dark Matter Energy at the edge of the Universe. The highest value of Time/Energy at the center point.
5. Pick a point on that Time Line and put a dot.
6. Draw a small circle around your dot ~5 billion Light Years.

This is how we are viewing the Universe along our Time Line from Center to Edge.

## Conclusion

- A. How do we see farther back in Space/Time? We look towards "age" at the center.
- B. How do we see further ahead in Space/Time? We look towards, "youth", the opposite direction, or a 180° Earth circumference different direction away from Center. Towards the Edge of the always further moving away Universe Edge. This measurement is taken as Our Time Line, from Center towards the Universe Edge.
- C. This is required knowledge for future Space Exploration. As we move beyond our Solar System. We will need 3 points of reference minimum. A Start Point/Universe Center/Location traveled to. If our exploring future selves ever want to try to get home again.

Approximately June of last year I was reminded of my Hypothesis and recognized no answers had yet been put out by Scientists for such things. I began reaching out to the Scientific community. After a couple months I was finally contacted back by one Astrophysicist named Barry Lebst. He informed me the Universe shape a perfect sphere with all particles moving outward, that was Einstein's Exactness Theory. He did not offer any suggestions or criticism. He simply told me to continue with my work. He did express to me, that most Astrophysicists believed Einstein's other Universe theory. Einstein's Theory of Relativity. That is certainly incorrect as Barry and a group of his friends proved Einstein's Exactness Theory with their ACRET system prior to his retirement. Also if we apply the measurement of Time to relativity we change it to Exactness, for even a box and loaf of bread have a Center that is measurable by some tool.

With that all understood.

Technology: "Science Fiction" Star Trek Space Travel.

(To be more precise, it is actually also our first form of Time Travel.)

I'll begin with explaining my understanding of Particles, & a little Particle Physics too. You have a Particle in Space the most abundant Particle called a Neutron. Outside our Universe I now believe this is the only Particle found. It is the, "Genetic Memory", for Neutral as our Universe tries to get back to it. All other particles fall into 2 categories. You have, "Electrical Positive", particles of Solid Matter like Stars, Planets, us, etc. As our Universe began and even now as our Universe continues to expand, the Solid Matters interaction with Neutrons is a friction reaction. "Electrical Negative" particles called Dark Matter are produced. The Dark Matter fills in between the Solid Matter, "Electrons" attracted to "Protons". Neutral is achieved in theory. As Time increases, Dark Matters abundance or density and it's energy increases. Though the Universe can never actually

hit Neutral, as Time and growth never stops. So Dark Matter continues to increase in every location from the Center outward. Though moving outward from the Center, we see the abundance of Dark Matter reducing in both its density and its energy value relative to that location in the Universe. The reduction in Dark Matters value at a location in the Universal from the Center, is consistent with the reduced value of Time for existence at that location moving outward from the Center.

Now Black Holes, some Quantum Physics, & how those Particles continue to react naturally. Previously thought to be a work of extreme Gravity, Black Holes are simply an extension of our new understanding of Particle Physics. Black Holes form from a violent reaction, as a massive amount of positive energy is released with a Star exploding. As a Star begins to breakdown, the Gravity of the Star weakens causing the Star to begin expanding. Once the breakdown has reached a critical state the Star will explode. With the explosion Electrons along with all Particles are ejected outward from the Star, much like occurs with a Fission or Atomic Blast. Initially Particles are sent out, yet a strong ProtonRotonda pull remains. The second reaction after ejection is a collapsing of Particles in towards the high Proton energy. The strong draw pulls Electrons even those attached to Atoms to move in towards the remaining PStar Proton Force. The high flow of Electrons is what causes the next reaction from the Neutron Particles. Neutrons have a different reaction to this violent occurrence or release of the massive amount of Star energy. Neutrons bond when subjected to a high flow of Electrons coming in contact with them. Neutrons with high Electron Energy Bond and form the surface of a Wormhole. Dark Matter clinging to the positive energy react as Electrons do, by racing to the higher Positive Energy. As Dark Matter will have attached to the immediate Solid Matter, it tears the Solid Matter apart as it races to the other end of the Wormhole towards the greatest Power Source. The new location in Space will be deeper towards the Center of the Universe. In a much older and stronger energy location of Space. With an increase of Positive Energy, an increase of Negative Energy is also required to equalize toward Neutral. This is why the Wormhole is able to select its ending location. The Wormhole's ejection or release site in Space, this debris field as we view it appears like a Star Hatchery. As the Solid Matter re-bonds to form a new Star, with new Planets, as it sets outward on a new Time Line for those Particles of Matter. I believe it might even be possible that through the Neutrons Bonding, this could alter the speed of Dark Matter production permitting it to increase during that period.

Stephen Hawking helped me understand that part better. He observed Plasma emitted from an open Black Hole. Plasma is Star. Intense inescapable Gravity wouldn't permit this. A Wormhole going to a Star Hatchery, with Dark Matter too busy traveling with Solid Matter in tow towards the highest Positive energy. Would not cling to this new lower energy Matter as it travels to its new location. Should in theory permit a star's plasma ejection to reverse flow prior to unoccupied Dark Matter from returning it to its new location. As well a weakening of the Black Hole as Neutral gets close to being returned at that location, with energy reduced the Neutron Particles would lose their Bond allowing the Wormhole to close. That could also permit the viewed event.

The Particle explanation for "Positive Energy" and "Negative Energy". It is my understanding that the Scientific Community is already in agreement on. They already express the Positive and Negative Forces of Solid Matter and Dark Matter.

Now Finally, the Technology that puts it all together.

The 1st Human to discover how Antigravity Technology worked was Nikola Tesla. Tesla never told us how he could float huge stones in his back yard, though we know he was able to do it by multiple accounts. The technology was actually rediscovered by Humans in 1951, after the 1947 the Roswell crash. In 1951 the U.S. Army Air Corps/ current Airforce, having reverse engineered the Technology began testing it. The video was declassified and released on TV via a series "Declassified Files". They didn't explain much of the Technology as they showed the Test Video. They simply said that the power requirements where so great, a power plant of power was required for the successful test, (1951 Power Plant produced ~2.25 megajules of Electricity, equivalent to that of powering ~1,800 homes simultaneously in 1 second of time. Yet with successful test, 2 beautiful UFO shaped object were floating around flying like UFOs should. Now.... When a wing is so much cheaper to produce, even for varying environments one may encounter within an Atmosphere. Why would an advanced race use this technology as primary for flight technology? Through my research I discovered, that within an Atmosphere the Technology repels Gravitational Force. This repelling of Gravity pushes the craft away from Planet's Surface causing it to fly. That craft is capable of flying in all types of Planetary Environments, regardless of air density or if there is a lack of Aerodynamic properties for the craft; as well as within any specific reduced Aerodynamic permitting Environments. The Technology used in that manner is, "Flying Cars". As no Aerodynamics is required or needed for flight, other than the Technology itself that is. Making a Flying Car much like a Helicopter in that respect. Yet in Space outside an Atmosphere, surrounding an object with that much Electricity, causes the Neutrons to bond. Putting the craft in a Universe Time Warp Bubble. Allowing one to travel great distances through Universal Time, at tremendous speed, relative to the distance traveled. Yet the traveler continues to exist in sequence with their Planetary Time Line that traveler originated from. An hour in the Bubble, is an hour back home as well. However, within that hour you could have traveled millions of Light Years distance, as you travel through the Fabric of Space and Time. That portion of the technology is certainly also Time Travel as you travel great distances through Space between locations in a inappropriate amount of Time for Distance Traveled. The Engine for the Roswell UFO was Fusion Power. Fusion Power is the same Technology simply another side of it. With Fusion Power we use Lasers as a delivery device for the Electricity. We point the Lasers at Hydrogen Atoms, and (Subatomic Particles of Hydrogen), we then push up the power of the Lasers to a tremendous amount of Electricity. This action and large amount of Power causes the Hydrogen Molecules to Bond just like Neutrons do in open Space. With Hydrogen Fused or Bonded the, "Star in a Bottle", begins to produce more power than it requires to keep the Bond. For the Bond to be maintained the flow of Electrons sent into the Atoms must continue. As the flow of Electrons stop, so does the Star's bond or Fusion of the Neutrons, this allows the Star to break down and it falls apart within the Reactor.

The Bonding of Neutrons forms a "Time Bubble". An outward direction of Magnetic and Electron Energy forms a Time Bubble we can see and also interact with, such as our Planets Atmosphere's outer Surface. An inward direction of Electrons still forms a Time Bubble though it is viewed as a Star's Mass. In Space with a Star the Time Bubble is broken as the Star collapses, the Particles are returned to their origin location in Space closer

to the Center of our Universe via a Black Hole. Inside a Reactor as yethe Time Field breaks down the Star Particles return to their origin Time, as a vial inside the Reactor.

So... That's how the Roswell Technology works.

### Time Explained

Seconds, minutes, hours, days, weeks, months, seasons, and years. Are all concepts for measuring Time.

Yet there are different types of Time.

The afore mentioned concepts, only apply to our specific Time Line. One can argue that Time is actually at its fastest, at the max velocity of our Universe Expansion.

1. Universe Time: is How long the Universe has existed. As it expands new Universe and Time at that new expanded to location. The oldest location of course being at the Center where Time and Space, or that is to say where our Universe began.
2. Particle Time: The oldest Particles Neutrons pre date our Universe. Yet within our Universe Particle Time flips from Universe Time. The Oldest Particles are found out at the edge of Universe. Youngest Particles are found closest to the Center of our Universe. Time Line Time better explains why.
3. Time Line Time: Particles Planets and Solar Systems travel on a Time Line until their specific end. A Star explodes taking those Particles deeper towards the Center to be reformed and to begin a new Time Line.

### Time Travel

Knowing what Type of Time you desire to travel.

1. Einstein's expression was that of traveling Time Line Time. Though it is possible to accomplish a velocity greater than the Speed of Light. (Scientists have achieved at a Subatomic Level in a Lab.) The end result is as was expressed by Einstein. By forming a Time Bubble around the traveler through achieving the proper velocity. Inside the Time Bubble, the traveler would grow out of sequence or out of Time with their origin Time Line. I do not believe a reversal of such an effect should ever be sought after. Certainly one can see how much more damage than good could come from such an advancement.

2. My expression of Time Travel transverses Universe Time great distances almost instantly, as Time is a location in Space. While keeping the travelers in perfect sequence or Time with their origin Time Line, the cell Decay Rate is not altered or offset from those at origin by the traveling process.
3. Scientists even now think they have seen Particles traveling through the 3rd type of Time, being Particle Time. Though theoretically any Particle or group of Particles can travel the distance of a Particles Time in Space. Simply by viewing a Black Hole, we see Particles traveling through Time to a different location. Should we travel using Roswell Technology, our Particles will be Time Traveling also.

These new ideas and understanding of Particle Physics, Quantum Physics, Science, Physics, Astrophysics, are all my own discoveries. I am only expressing these new ideas to you and the World now.
